

FOR IMMEDIATE RELEASE

ONEWEB AND INTELLIAN ANNOUNCE USER TERMINAL PARTNERSHIP TO ENABLE REMOTE ENTERPRISE AND CELLULAR BACKHAUL CONNECTIVITY EXPANSION

- This exciting partnership is the next significant milestone in the development of OneWeb's system by enabling the first of the customer facing "user terminals" which will be used across use varying customer markets.
- This high-performance, enterprise-grade user terminal for OneWeb's network will deliver low-latency, fixed services, and is specifically designed to have high efficiency for data intensive use cases.
- This premier user terminal will provide for the expansion and upgrade of backhaul infrastructure and enable remote connectivity to help OneWeb advance its mission of bringing internet access everywhere for everyone.

6 May 2019 – Washington, DC, May 6, 2019 – OneWeb, a global communications company with a vision to enable internet access everywhere for everyone, has announced a partnership with Intellian, to build user terminals designed specifically for remote enterprise networks, cellular backhaul expansion and remote connectivity needs. The user terminals will be the units provided to customers to enable the high-speed, low latency service that our global satellite constellation will deliver.

These user terminals will be perfect for a range of use cases including connecting businesses in rural areas, schools, hospitals, farms and community centers.

This partnership represents a significant step-forward in the development of OneWeb's system following the launch of its first satellites and its first customer announcements in February 2019. With six satellites now in orbit and a range of antennas now in place, OneWeb is ready to advance the development of its portfolio of user terminals, ranging from compact flat panels to highly-efficient dual parabolics. All our user terminals will be designed to serve a range of customer needs, market verticals and use cases.

With many remote and unconnected areas around the world still lacking access to broadband, these user terminals will help to close to gaps and connect remote enterprises, as well as, expand cellular backhaul capacity which is essential for extending connectivity. The terminals will utilize dual-parabolic antennas to deliver cost-effective and efficient throughput making high-speed and low-latency services available in hard-to-reach areas and helping bridge the digital divide.

*"This is an exciting moment for OneWeb as we expand and develop our user terminals with an extremely important partner", said **Adrian Steckel, CEO of OneWeb.** "Our user terminals will always be designed with customer needs in-mind, ensuring we deliver a service they can trust. We're delighted to be partnering with Intellian and this agreement marks a major step forward in our efforts to bridge the global digital divide."*

Press Release

*“Intellian is excited to be chosen by OneWeb with its fascinating vision and innovative LEO constellation”, said **Eric Sung, CEO of Intellian**. “We’re thrilled our design and manufacturing capabilities will help connect people in remote locations to this new Satellite ecosystem.”*

OneWeb expects these terminals to be available for Commercial use in 2020.

-Ends-

About Intellian Technologies, Inc.

Intellian is the global leader of mobile satellite communication systems for maritime, government, military and NGSO sectors. Founded in 2004, Intellian is leading the way in driving innovation in the satellite communications market. The industry’s top ranking companies choose Intellian’s maritime satellite antenna systems to deliver connectivity when it matters most.

Intellian operates in 12 offices worldwide, including global logistics centers in Asia, the Americas, and Europe, and is supported by a network of more than 550 partners across the globe. Intellian Technologies Inc. is listed on the Korean Stock Exchange, KOSDAQ (189300:KS).

About OneWeb

OneWeb's mission is to enable Internet access for everyone, everywhere. OneWeb is building a communications network with a constellation of Low Earth Orbit satellites that will provide connectivity to people around the world. OneWeb is creating business solutions for Broadband, Government and Cellular Backhaul. Its high speed, low latency, network will offer game-changing Mobility solutions to industries that rely on global connectivity, such as Aviation, Maritime, Automotive, Trains and more. <http://www.oneweb.world>
