Giants of the Field: The Plowing Champs

Big tasks require extraordinary machines. They pull, drag and plow through every field. Machineseeke.co.uk, the leading online-marketplace for used machinery created a ranking of the world's most powerful tractors for you.

THE WORLD'S MOST POWERFUL TRACTORS

Source: www.machineseeke.co.uk

Big tasks require extraordinary machines. They pull, drag and plow through every field. Whether bulldog, tug or farm tractor: these powerhouses reliably master the toughest operating conditions on the largest fields and construction sites around the world. The strongest tractors pump out up to a whopping 692 hp at maximum power to handle these challenges.

Infographic: Statistic visualizes the world's most powerful tractors by horsepower in descending order

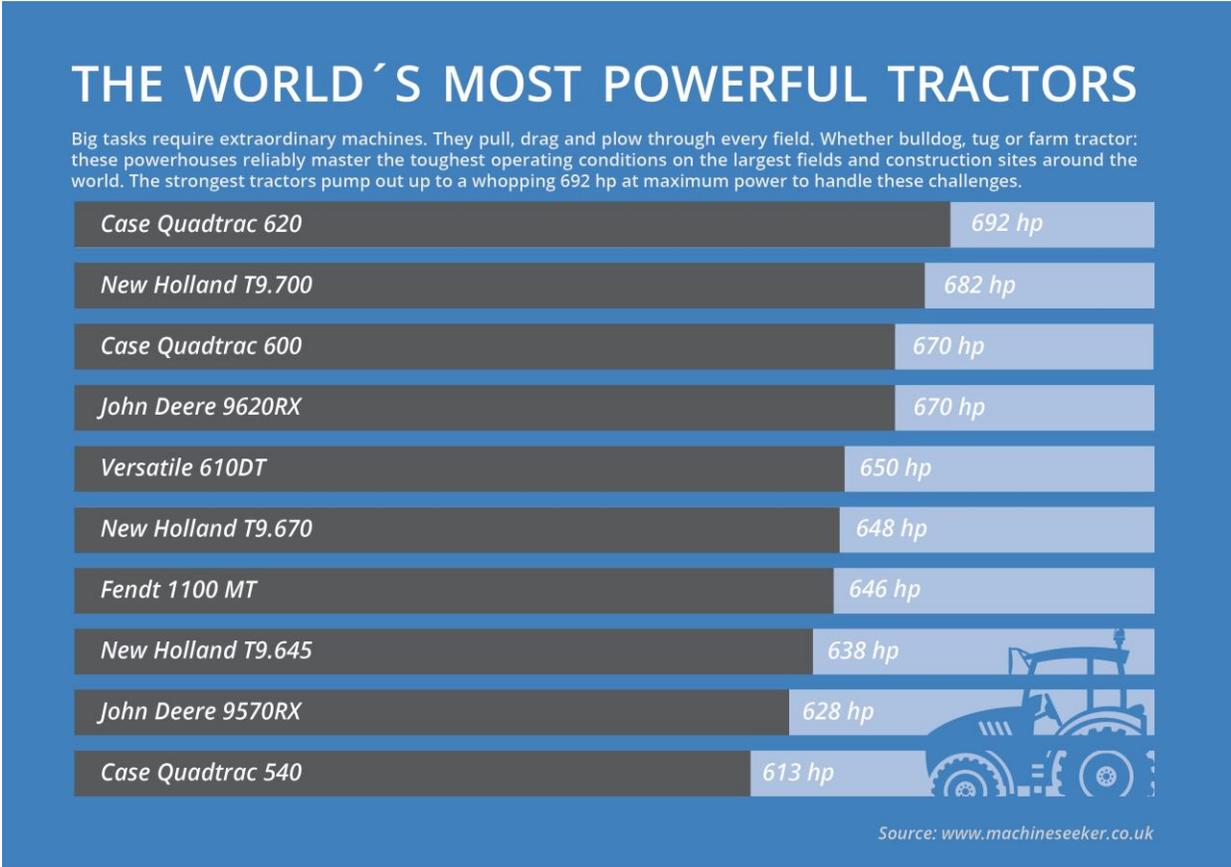

They are called bulldogs, tugs or farm tractors: these powerhouses reliably master the toughest operating conditions on the largest fields and construction sites around the world. The strongest tractors pump out up to a whopping 692 hp at maximum power to handle these challenges.

“With an impressive maximum torque of roughly 2220 lb-ft these machines have sufficient power to pull heavy trailers and ploughs through any terrain”, says Thorsten Muschler, founder and CEO of Machineseeke.co.uk.

The first place in the ranking goes to the US tractor Case IH Steiger/ Quadtrac 620. The industry leader weighs over 52,910 lbs. and uses chain drive. The cavernous tank capacity of approximately 500 gallons corresponds to about 15 full bathtubs.

"Digitization is advancing in agriculture", explains Muschler. Fully automated tractors already use agricultural GPS systems to operate efficiently. "The driver predominantly takes on a monitoring role. Used machinery can easily be retrofitted with this technology."

Machineseeke.co.uk, the leading online-marketplace for used machinery has put together a photo gallery of the world's most powerful tractors (by horsepower) for you. Have fun clicking through.

About us

[Machineseeke.com](https://www.machineseeke.com) is the world's leading online marketplace for used stationary machines. More than 5,000 dealers currently offer more than 150,000 machines on the platform. As a global marketplace, the company is available with its domains Machineseeke and Maschinensucher in more than 60 countries. Used machines worth more than 700 million euros are inquired every month.

Top 10 world's most powerful tractors:

1: The ranking is dominated by Case IH Steiger/Quadtrac 620 with an incredible 692 hp. Thus, it is almost beating the Porsche top model 911 GT2 RS in performance. The heavyweight brings its 2220 lb-ft of torque to the ground via a chain drive.

2: The second-placed New Holland T9.700 has only ten hp less and delivers a whopping 682 hp. Instead of a chain drive New Holland has given the blue monster eight tires.

3: Coming third in the ranking is the Case IH Steiger/Quadtrac 600. It delivers up to 670 hp with a weight of 48,500 lbs. Its tank holds 1,880 litres of diesel.

4: The John Deere 9620RX narrowly misses a podium position with the same power of 670 hp. With a net weight of 55,100 lbs., it weighs 6,600 lbs. more than the third placed.

5: With its eight gigantic tires the Versatile 610 DT is particularly striking. These bring 650 hp to the "road". Optionally a chain drive can be ordered.

6: The second half of the tractor ranking is led by the New Holland T9.670. The 12.7 litre capacity engine delivers a powerful 648 hp.

7: The Fendt 1100 MT has a maximum output of 646 hp. With its 41,900 lbs. weight it is the lightweight of the world's ten strongest tractors.

8: The American Hercules New Holland T9.645 generates up to 638 hp. With a weight of 44,090 lbs. huge trailers are easily pulled.

9: Besides building the fourth-placed 9620RX the American manufacturer Deere & Company offers tractor enthusiasts a more compact model and enters the top 10 list once again. The John Deere 9570RX has a power of 628 hp with its 15-litre cubic capacity engine.

10: The tenth place goes to the IH Steiger/Quadtrac 540 CVX with 613 hp. Its 52,900 lbs. weight is moved over the field with the help of a caterpillar drive.

Hp and weight data are rounded to the next integer.

Machineseeker does not consider custom made tractors in this ranking.
