## **Sony Announces Addition of Uncompressed 14-Bit RAW Still Image Capture for New $\alpha$ Cameras**

***New  $\alpha$ 7S II to Feature Selectable Compressed and Uncompressed 14-Bit RAW at Launch; Free Firmware Updates Coming for Additional Models, Beginning with  $\alpha$ 7R II***

Sony today announced user selectable compressed and uncompressed 14-Bit RAW image capture will be featured in the new  [\$\alpha\$ 7S II](#) once it arrives in stores later this year. Additionally, they have announced plans to add user selectable compressed or uncompressed 14-Bit RAW still image capture via firmware update to additional cameras, beginning with the recently introduced  [\$\alpha\$ 7R II](#) full-frame mirrorless model.

The  $\alpha$ 7S II and  $\alpha$ 7R II are compatible with Sony's growing line-up of  $\alpha$  - mount lenses, which now totals 64 different models including 13 native 'FE' full frame lenses. Sony aims to expand its line-up of  $\alpha$  E-mount lenses supporting 35 mm full-frame sensors to over twenty in 2016.
